

Making Superior Vegetables a Reality™

Buckskin

Bright Seed Alternative for High Plains

PINTO BEAN

TRIAL DATA*

BUCKSKIN

Approx. Maturity	93-97 days
Plant Type	3B
Approx. Seed Count	1,234 seeds/lb.
Disease Resistance	IR: BCMV

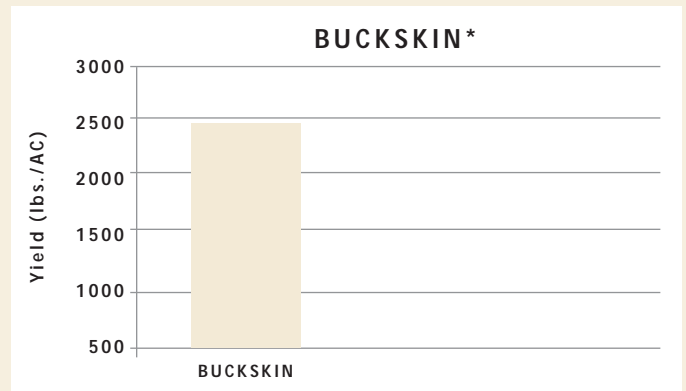

*See reverse side for disease resistance abbreviation chart

PROFILE:

Buckskin is an early season variety with broad adaptability. It tends to have a strong early pod set, early maturity, and even dry down contribute to a timely harvest. Buckskin also has an arched structure allowing most pods to stay off the ground, which helps maintain good bean quality.

ECONOMIC PROFILE:

Buckskin's distinctive bright background pinto color holds well in storage and lends itself to marketing. In addition to the bright seed, Buckskin brings a disease resistance package that helps ensure consistent yields from year to year.

*Data from the Great Plains region

Making Superior Vegetables a Reality™

KEY TO RESISTANCE ABBREVIATIONS FOR BEAN

Plant Type 1A	Bush determinate erect stem
Plant Type 2A	Erect growth indeterminate short runners
Plant Type 2B	Erect growth indeterminate with medium to long runners
Plant Type 3B	Prostrate vine indeterminate growth with long runners
BCMV	Bean common mosaic caused by the specified strains of <i>Bean common mosaic virus</i>
BCTV	Curly top caused by <i>Beet curly top virus</i>
BGYMV	Bean golden yellow mosaic caused by <i>Bean golden yellow mosaic virus</i>
CI	Anthraco nose caused by <i>Colletotrichum lindemuthianum</i>
Psp	Halo blight caused by <i>Pseudomonas savastanoi</i> pv. <i>phaseolicola</i>
Pss	Bacterial brown spot caused <i>Pseudomonas syringae</i> pv. <i>syringae</i>
Ua	Rust caused by the specified races of <i>Uromyces appendiculatus</i>
HR	High Resistance: describes plant varieties that highly restrict the growth and development of the specified pest or pathogen under normal pest or pathogen pressure when compared to susceptible varieties. Highly resistant varieties may, however, exhibit some symptoms or damage under heavy pest or pathogen pressure.
IR	Intermediate Resistance: describes plant varieties that restrict the growth and development of the specified pest or pathogen, but may exhibit a greater range of symptoms or damage compared to highly resistant varieties. Intermediately resistant varieties will still show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pest or pathogen pressure.

In cases where specific races or strains are not noted the variety is resistant to some, but not necessarily all known races or strains of the pathogen.
