

Making Superior Vegetables a Reality™

NAVY BEAN

TRIAL DATA*

ENSIGN

Approx. Maturity	107 - 111 days
Plant Type	2A
Approx. Seed Count	2,806 seeds/lb.
Disease Resistance	IR: BCMV ("I" gene)

*See reverse side for disease resistance abbreviation chart

Ensign

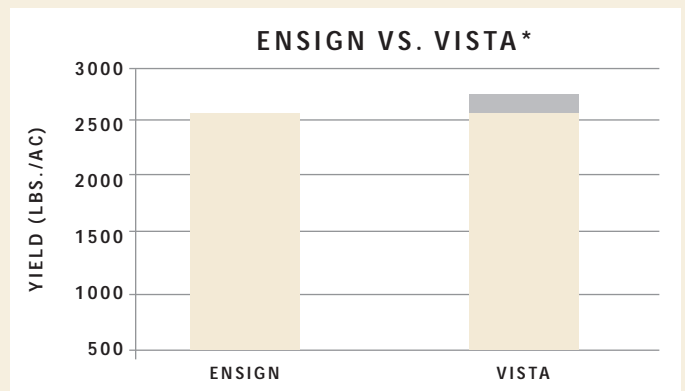

Upright Mid-season Navy

PROFILE:

Ensign is a broadly adapted white navy bean that matures several days earlier than Schooner. Its upright structure and high scattered pod set facilitates irrigation timing and may reduce the incidence of white mold and water damage. An even dry down enhances Ensign's yield potential.

ECONOMIC PROFILE:

Ensign's early to medium maturity makes it a good candidate for replants or late plants. Its maturity, coupled with a good dry down at harvest, may give growers peace-of-mind and flexibility when used to enhance their varietal makeup.

*Data from the Great Plains region

Vegetables a Reality™

KEY TO RESISTANCE ABBREVIATIONS FOR BEAN

Plant Type 1A	Bush determinate erect stem
Plant Type 2A	Erect growth indeterminate short runners
Plant Type 2B	Erect growth indeterminate with medium to long runners
Plant Type 3B	Prostrate vine indeterminate growth with long runners
BCMV	Bean common mosaic caused by the specified strains of <i>Bean common mosaic virus</i>
BCTV	Curly top caused by <i>Beet curly top virus</i>
BGYMV	Bean golden yellow mosaic caused by <i>Bean golden yellow mosaic virus</i>
CI	Anthraco nose caused by <i>Colletotrichum lindemuthianum</i>
Psp	Halo blight caused by <i>Pseudomonas savastanoi</i> pv. <i>phaseolicola</i>
Pss	Bacterial brown spot caused <i>Pseudomonas syringae</i> pv. <i>syringae</i>
Ua	Rust caused by the specified races of <i>Uromyces appendiculatus</i>
HR	High Resistance: describes plant varieties that highly restrict the growth and development of the specified pest or pathogen under normal pest or pathogen pressure when compared to susceptible varieties. Highly resistant varieties may, however, exhibit some symptoms or damage under heavy pest or pathogen pressure.
IR	Intermediate Resistance: describes plant varieties that restrict the growth and development of the specified pest or pathogen, but may exhibit a greater range of symptoms or damage compared to highly resistant varieties. Intermediately resistant varieties will still show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pest or pathogen pressure.

In cases where specific races or strains are not noted the variety is resistant to some, but not necessarily all known races or strains of the pathogen.
