

Second Early to Main Season

Esteem

Esteem (RML 7923-VP) is the latest development in the series for the Desert Southwest with a tight seed cavity and dark orange flesh color similar to Sol Real but a few days later in maturity with a less concentrated harvest. When compared to “true main season” type varieties, Esteem typically matures 3-5 days earlier and requires fewer harvests to finish the field. The plant has produced a very strong robust plant that has protected the fruit under adverse conditions. Fruit are mostly 9 – 12’s and have presented a raised, ropey net with excellent net density providing a very attractive melon that will have your customers asking for more.

T R I A L D A T A

Type	Second Early to Main Season
Approx. Days to Maturity	80
Average Size, Shape & Length x Width (in.)	Mostly 9 – 12’s. Slight oval. 6 x 5.5
Interior	Dark orange. Tight cavity.
Exterior Appearance	Raised net. Thick ropey. High net density. Sutureless.
Disease Resistance or Tolerance*	F0 & 2, PM1 & 2, S*

Abbreviation Key

- F** Resistant to the Fusarium wilt races noted
- PM** Resistant to the powdery mildew races noted
- S*** Tolerant to sulphur

The VIP seal denotes Value-added, Innovation and Performance.
