

California Determinate Open Field

Bobcat

In California mature green and vine-ripe markets, Bobcat has demonstrated the fruit quality, uniformity, and firmness to make it an unwavering choice for early and mid-season plantings. Typically producing smooth fruit in the large and extra-large sizes, Bobcat's plant habit has been vigorous, yet compact enough to provide excellent foliage protection to the crop. Typically, Bobcat produces high yields of uniform extremely firm fruit that hold up well from farm to market for mature green to vine ripe harvest.
